ECE 102 Midterm

TOTAL POINTS

85 / 106

QUESTION 1

Signal/System/Convolution 35 pts

1.1 (a)i 5 / 5

✓ **+ 5 pts Correct**

+ **4 pts** Correctly computed periods of both signals and its ratio, but with insufficient justification

+ **2 pts** Attempted to justify the signal is not periodic, with insufficient or incorrect justification

+ **3.5 pts** Stated no common period, without computing or mentioning the ratio of periods

+ **0 pts** Incorrect answer or no Justification

1.2 (a)ii 0 / 5

+ **5 pts** Correct

✓ **+ 0 pts Incorrect answer or no/incorrect justification**

+ **2 pts** Insufficient Reasoning to justify the answer

1.3 (a)iii 5 / 5

✓ **+ 5 pts Correct answer**

+ **3 pts** One side is simplified correctly

+ **1.5 pts** Correctly used the sifting property on the right hand side

+ **1.5 pts** Correctly used the sampling property on the left hand side

+ **0 pts** Incorrect answer or reasoning

1.4 (b) 10 / 10

✓ **+ 10 pts Correct**

+ **5 pts** Correctly identify the linearity property

+ **0 pts** Incorrect

1.5 (c) 8 / 10

+ **10 pts** Correct h(t)

+ **8 pts** Correct h(t) for t<2

✓ **+ 8 pts Correct shape of h(t) but incorrect amplitude**

+ **2 pts** correct h(0)

+ **2 pts** correct h(1/4)

+ **2 pts** correct h(5/8)

+ **2 pts** Correct h(t) for t>2

+ **0 pts** Incorrect

QUESTION 2

LTI Systems 20 pts

2.1 (a) 4 / 4

✓ **- 0 pts Correct**

- **1 pts** minor mistakes

- **2 pts** half correct

- **4 pts** incorrect

2.2 (b) 10 / 10

✓ **+ 3 pts use LTI properties.**

✓ **+ 3 pts correct convolution equation/multiplication in frequency domain.**

✓ **+ 2 pts correct convolution results/inverse FT results.**

✓ **+ 2 pts correct time shift for the last step.**

+ **0 pts** incorrect

2.3 (c) 5 / 6

- **0 pts** Correct.

✓ **- 1 pts constant term incorrect.**

- **2 pts** time shift incorrect.

- **2 pts** inverse FT incorrect.

- **3 pts** missing/incorrect exponential/unit step function.

- **4 pts** calculate in frequency domain with wrong FT.

- **5 pts** incorrect calculation with a correct convolution equation.

- **6 pts** incorrect.

QUESTION 3

Fourier Series 20 pts

3.1 (a) 10 / 10

✓ **- 0 pts Correct**

- 0.5 pts Did not explicitly use the angular frequency ωg = aωo, or Tg = To/a in the Fourier Series.

- 5 pts Partially correct

- 7.5 pts Incorrect

- 10 pts See comment

- 10 pts No substantive answer

3.2 (b) 3.5 / 10

- 0 pts Correct

- 1 pts Did not mention divisibility of k by m1 and m2

✓ **- 6.5 pts Incorrect**

- 10 pts See comment

- 2 pts Missing alphas or different scale factor (that does not contain t, since it shouldn't)

- 2 pts k or mk instead of k/m

- 10 pts No substantive answer

QUESTION 4

Fourier Transform 25 pts

4.1 (a) 10 / 10

✓ **+ 10 pts Correct**

+ 5 pts Attempted to use inverse FT formula and did many correct algebraic steps.

+ 3 pts Wrote equation of Fourier Transform but did not substitute omega = 0

+ 2 pts Attempted integral incorrectly, or other attempted math with Fourier transform (either of rect/sincs, or inverse FT).

+ 2 pts Explanation of property with no proof, or applying it to sinc(2t) incorrectly.

+ 0 pts Incorrect or no answer

4.2 (b) 5 / 5

✓ **+ 5 pts Correct, with Fourier Transform taken correctly.**

+ 4 pts Took the Fourier Transform correctly, did not calculate an area or did so incorrectly.

+ 2 pts Did not compute Fourier transform of sinc(2t) correctly, or other incorrect algebra.

+ 0 pts No appropriate work for partial credit or answer.

4.3 (c) 4.5 / 5

+ 5 pts Correct, omega_0 > 2*pi, or correct based on their answer to part (b).

✓ **+ 4.5 pts Mistake on the amount of shift (e.g., 4pi instead of 2pi; or did not plug in omega = 0; or did not specify the shift precisely).**

+ 3.5 pts Recognize the FT is time-shifted, did not correctly deduce when rect is 0 or other incorrect algebra.

+ 3 pts Recognized the FT is time-shifted.

+ 2 pts Incorrect answer due to incorrect rationale, or work appropriate for partial credit (such as showing some conditions where it's zero).

+ 0 pts No appropriate work for partial credit, or no answer.

4.4 (d) 5 / 5

✓ **+ 5 pts Correct, alpha=-1/2, or correct based on their answer to parts b or c. We required you to simplify to a number since we asked for a value -- it wasn't sufficient to keep things in terms of rects and sincs.**

+ 4 pts Would have had the correct answer if recalled sinc(0) = 1 or other minor algebraic constant.

+ 3 pts Didn't simplify rect(0) or sinc(0), but had the correct (or reasonable) equation; or other related error.

+ 2 pts Incorrect answer due to not treating the rect <-> sinc term correctly, or other partial work.

+ 1 pts Attempt to simplify the integral with incorrect arguments; or other incorrect / incomplete arguments.

+ **0 pts** No appropriate work for partial credit, or no answer.

QUESTION 5

5 Bonus **0 / 6**

- **0 pts** Correct for intended interpretation

✓ **- 6 pts No answer or incorrect justification or no justification**

- **3 pts** Partially correct

- **5 pts** If "any" was interpreted as "some" rather than "every": correct example of some causal system S

- **6 pts** See comment

Problem 3	____	/ 20
Problem 4	____	/ 25
BONUS	____	/ 6 bonus points
Total	____	/ 100 points + 6 bonus points

1. **Signal and System Properties + Convolution** (35 points).

(a) (15 points) Determine if each of the following statements is true or false. Briefly explain your answer to receive full credit.

i. (5 points) $x(t) = \cos\left(\sqrt{3}t\right) + \sin(-3t)$ is a periodic signal.

$T = \frac{2\pi}{\sqrt{3}}$ $\quad T = \frac{2\pi}{-3}$

$\frac{T_1}{T_2} = \frac{\cancel{2\pi}}{\sqrt{3}} \cdot \frac{-3}{\cancel{2\pi}}$

$= -\frac{\cancel{3}\sqrt{3}}{\cancel{3}} = -\sqrt{3}$

False. $-\sqrt{3}$ is not rational $\frac{T_1}{T_2}$

Summation of

A signal is only periodic if $\frac{T_1}{T_2}$ is rational. $\sqrt{3}$ is not, therefore ~~irrational~~.

Not periodic

ii. (5 points) A signal can be neither energy signal nor power signal.

$E = \int_{-\infty}^{\infty} |x(t)|^2 dt$ $\qquad$ if Energy $= C$ then $P = 0$

$P = \frac{1}{2T} \lim_{T \to \infty} \int_{-T}^{T} |x(t)|^2 dt$ $\qquad$ if Power $= C$ then $E = \infty$

False. A signal will fall into either of those categories, if E is ∞, then Power signal will multiply that by 0 $\left(\frac{1}{2T}\right)$ to make it finite

iii. (5 points) Let $f(t) * g(t)$ denote the convolution of two signals, $f(t)$ and $g(t)$. Then,

$$f(t)[\delta(t) * g(t)] = [f(t)\delta(t)] * g(t)$$

$\cancel{f(t)[\delta(t) * g(t)]}$

$\cancel{= f(t)\delta(t) * f(t)g(t)}$

~~False. the associative property only applies when all three functions are being convoluted. f(t) is multiplied.~~

The distributie ~~proprty will~~ apply ~~between × and~~ *

$$f(t)[\delta(t) * g(t)] = f(t)\int_{-\infty}^{\infty} \delta(\tau) g(t-\tau)\,d\tau$$

$$= \int_{-\infty}^{\infty} f(t)\delta(\tau) g(t-\tau)\,d\tau$$

$$[f(t)\delta(t)] * g(t) = \int_{-\infty}^{\infty} f(\tau)\delta(\tau) g(t-\tau)\,d\tau$$

False. In the case of the LHS (left hand side), f(t) is a constant, after the fact. in the RHS (right), f(t) is part of the convolution and becomes f(τ).

(b) (10 points) Determine if the following system is an LTI system. Explain your answer.

$$y(t) = \frac{x(t-1)}{t} + x(t-2) \tag{1}$$

$$y(t-\tau) = \frac{x(t-\tau-1)}{t-\tau} + x(t-\tau-2)$$

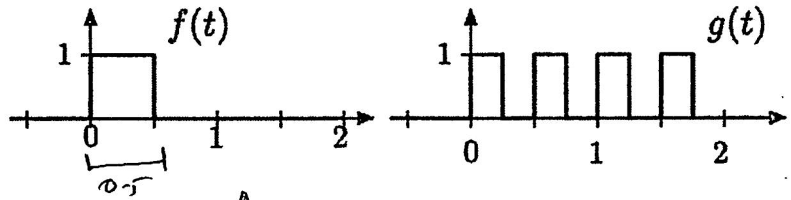
by delaying input. $= \dfrac{x(t-1-\tau)}{t} + x(t-2-\tau)$

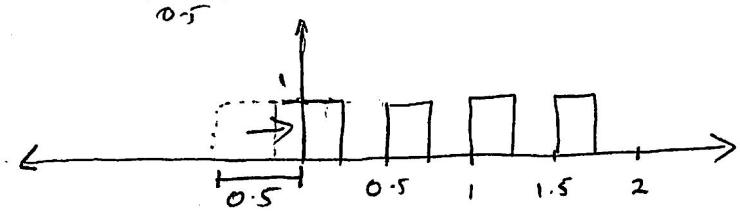
Not the same

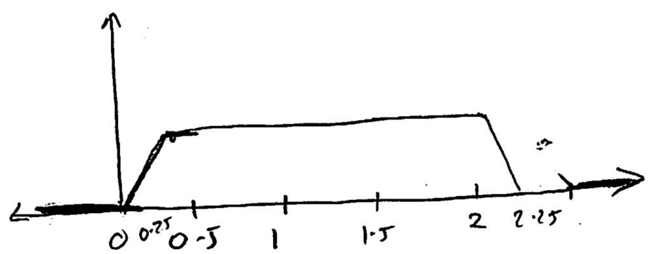
Not Time Invariant

No need to check for linearity, this system is not TI so therefore Not an LTI system.

(c) (10 points) For signals $f(t)$ and $g(t)$ plotted below, graphically compute the convolution signal $h(t) = f(t) * g(t)$. To receive partial credit, you may show $h(0)$, $h(1/4)$ and $h(5/8)$ in the graph when illustrating the convolution using the "flip and drag" technique.



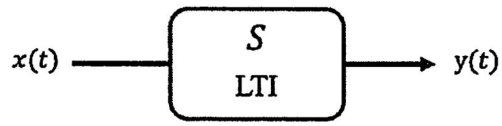




Flipping and dragging f(t), there will always be an entire block of g(t) inside f(t), it is building up until 0.25. Then it dies down between 2 and 2.25.

2. **LTI Systems** (20 points).

Consider the following LTI system S:



Consider an input signal $x_1(t) = e^{-2t}u(t-2)$. It is given that

$$x_1(t) \xrightarrow{\quad S \quad} y_1(t)$$
$$\frac{dx_1(t)}{dt} \xrightarrow{\quad S \quad} -2y_1(t) + e^{-2t}u(t)$$

(a) (4 points) Show that:

$$\frac{dx_1(t)}{dt} = -2x_1(t) + e^{-2t}\delta(t-2)$$

$$\frac{d(x_1(t))}{dt} = \underbrace{-2e^{-2t}u(t-2)}_{x_1} + e^{-2t}\delta(t-2)$$

chain rule of derivative

$$= -2x_1 + e^{-2t}\delta(t-2)$$

(b) (10 points) Find the impulse response $h(t)$ of S.

Hint: Since we have not provided S, we cannot straightforwardly input an impulse into the system and measure the output. One approach is to solve for $h(t)$ by writing the output of S in terms of a convolution when the input is ${}^{dx_1(t)}/_{dt}$, i.e.,

$$\frac{dx_1(t)}{dt} * h(t) =$$

$$(-2x_1 + e^{-2t}\delta(t-2)) * h(t) = -2y_1 + e^{-2t}u(t)$$

$$-2x_1 * h(t) + e^{-2t}\delta(t-2) * h(t) = -2y_1 + e^{-2t}u(t)$$

$$\cancel{-2y_1} + e^{-2t}\delta(t-2) * h(t) = \cancel{-2y_1} + e^{-2t}u(t)$$

$$e^{-2t}\delta(t-2) * h(t) = e^{-2t}u(t)$$

$$e^{-4}\delta(t-2) * h(t) = e^{-2t}u(t)$$

$$\delta(t-2) * h(t) = e^{-2t}e^{4}u(t)$$

$$S[\delta(t-2)] = e^{-2t+4}u(t)$$

b.c <u>LTI</u> $$S[\delta(t)] = e^{-2(t+2)+4}u(t+2)$$

$$= e^{-2t-4+4}u(t+2)$$

$$= e^{-2t}u(t+2)$$

Impulse Response

(c) (6 points) Consider a new system, S_2, whose impulse response is $h_2(t) = e^{-3t}u(t+3)$. Find this system's output to the following input signal:

$$x_2(t) = \cos\left(\frac{\pi}{4}t\right)\delta(t-1)$$

$$X_2(t) = \cos\left(\frac{\pi}{4}\right)\delta(t-1)$$

$$= \frac{\sqrt{2}}{2}\delta(t-1)$$

$$\frac{\sqrt{2}}{2}\delta(t-1) * e^{-3t}u(t+3)$$

$$\frac{\sqrt{2}}{2}e^{-3(t-1)}u(t-1+3)$$

$$y(t) = \frac{\sqrt{2}}{2}e^{-3t-3}u(t+2)$$

3. **Fourier Series** (20 points).

(a) (10 points) Let the Fourier Series coefficients of $f(t)$ be denoted f_k, and the Fourier Series coefficients of $g(t)$ denoted g_k. Let T_o be the period of $f(t)$. If $g(t) = f(a(t-b))$, where $a > 0$, show that

$$g_k = e^{-j2\pi \frac{ab}{T_o} k} f_k.$$

$$f(t) = \sum_{k=-\infty}^{\infty} f_k e^{j\omega_o k t}$$

$$f(t-b) = \sum_{k-\infty}^{\infty} f_k e^{j\omega_o k (t-b)}$$

$$f(at-b) = \sum_{k=-\infty}^{\infty} f_k e^{j\omega_o k (at-ab)}$$

$\hookrightarrow g(t)$

$$= \sum_{k=-\infty}^{\infty} f_k e^{j\omega_o k a t} e^{-j\omega_o k a b}$$

$$\omega = a\omega_o = a\frac{2\pi}{T_o}$$

$$g(t) = \sum_{k=-\infty}^{\infty} \underbrace{f_k e^{-j2\pi \frac{ab}{T_o} k}} e^{j\omega k t}$$

$$g_k = f_k e^{-j2\pi \frac{ab}{T_o} k}$$ ✓

(b) (10 points) Let the Fourier Series coefficients of $x(t)$ and $y(t)$ be x_k and y_k respectively, with respective periods T_1 and T_2. We define $f(t) = \alpha_1 x(t) + \alpha_2 y(t)$ with non-zero α_1, α_2, with period $T_o = m_1 T_1 = m_2 T_2$. What are the Fourier Series coefficients f_k in terms of x_k and y_k?

$$T_1 = \frac{m_2}{m_1} T_2$$

$$X(t) = \sum X_m e^{-j2\pi \frac{m}{T_1}}$$

$$y(t) = \sum y_n e^{-j2\pi \frac{m_1}{m_2} \frac{n}{T_1}} \qquad n' = \frac{m_1}{m_2} n$$

$$X(t) = \sum X_m e^{-jm\frac{2\pi}{T}}$$

$$y(t) = \sum y_{\frac{m_2}{m_1} n'} e^{-j2\pi \frac{n'}{T}}$$

$$f(t) = \sum_{m_2/m_1 \text{ is int.}} a X_m e^{-jm\frac{2\pi}{T}} + \sum_{m_2/m_1 \text{ is not int}} a X_m e^{-jm\frac{2\pi}{T}} + \sum_{m_2/m_1 \text{ is int}} b y_{\frac{m_2}{m_1} n'} e^{-jn'\frac{2\pi}{T}}$$

$$f_k = \begin{cases} a X_m & \frac{m_2}{m_1} \Rightarrow \text{not an integer.} \\ a X_m + b y_{\frac{m_2}{m_1} n'} & \frac{m_2}{m_1} \Rightarrow \text{integer} \end{cases}$$

4. **Fourier Transform** (25 points).
Consider the signal

$$x(t) = \text{sinc}(2t)$$

and let the Fourier transform of $x(t)$ be denoted $X(j\omega)$. We are interested in calculating the area under the curve of $x(t)$.

(a) (10 points) Prove that the following relationship holds.

$$\int_{-\infty}^{\infty} x(t)dt = X(j\omega)|_{\omega=0}$$

$$X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

if $\omega = 0$, then $e^{0} = 1$

$$X(j\omega)\Big|_{\omega=0} = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt \Big|_{\omega=0}$$

$$X(j\omega)\Big|_{\omega=0} = \int_{-\infty}^{\infty} x(t)\, dt$$ ✓

(b) (5 points) Use the result of part (a) to calculate:

$$\int_{-\infty}^{\infty} x(t)dt$$

for $x(t) = \text{sinc}(2t)$.

$$X(j\omega)\Big|_{\omega=0} = \int_{-\infty}^{\infty} \text{sinc}(2t)\,dt$$

f.t. of $\text{sinc}(2t) \Rightarrow \frac{1}{2}\text{rect}\left(\frac{\omega}{4\pi}\right)$

$$\frac{1}{2}\text{rect}\left(\frac{\omega}{4\pi}\right)\Big|_{\omega=0} = \int_{-\infty}^{\infty} \text{sinc}(2t)\,dt$$

$\frac{1}{2}\text{rect}(0)$

$$\underline{\frac{1}{2} = \int_{-\infty}^{\infty} \text{sinc}(2t)\,dt.}$$

(c) (5 points) Consider the following system:

$$y(t) = e^{-j\omega_0 t}x(t)$$

Let $x(t) = \text{sinc}(2t)$ and consider only $\omega_0 > 0$. Are there any values of ω_0 for which

$$\int_{-\infty}^{\infty} y(t)dt = 0$$

and if so, what value(s) of ω_0 does this hold for?

$$\text{f.t. } e^{-j\omega_0 t}\,\text{sinc}(2t) = \frac{1}{2}\,\text{rect}\left(\frac{\omega-\omega_0}{4\pi}\right)$$

$$\frac{1}{2}\,\text{rect}\left(\frac{\omega-\omega_0}{4\pi}\right) = \int_{-\infty}^{\infty} y(t)\,dt = 0$$

$$\text{rect}\left(\frac{\omega-\omega_0}{4\pi}\right) = 0$$

$$\text{rect}(t) = \begin{cases} 1 & |t| \leq 1/2 \\ 0 & \text{else} \end{cases}$$

$$\text{rect}\left(\frac{\omega-\omega_0}{4\pi}\right) \begin{cases} 1 & \left|\frac{\omega-\omega_0}{4\pi}\right| \leq 1/2 \\ 0 & \text{else} \end{cases}$$

$$= \begin{cases} 1 & |\omega-\omega_0| \leq 2\pi \\ 0 & \text{else.} \end{cases}$$

$$\text{rect}\left(\frac{\omega-\omega_0}{4\pi}\right) = 0 \text{ for } |\omega-\omega_0| > 2\pi$$

$$\omega-\omega_0 > 2\pi \qquad \omega_0-\omega < 2\pi$$

$$\omega_0 > 2\pi-\omega \qquad \omega_0 < \omega+2\pi$$

$$\omega_0 > \omega-2\pi$$

$$y(t) \text{ is } 0 \text{ for } \boxed{\begin{array}{l}\omega_0 > \omega-2\pi \\ \text{or } \omega_0 < \omega+2\pi\end{array}}$$

(d) (5 points) Consider the following system:

$$y(t) = x(t) + \alpha \mathrm{rect}(t)$$

Let $x(t) = \mathrm{sinc}(2t)$. Are there any values of α for which

$$\int_{-\infty}^{\infty} y(t)dt = 0$$

and if so, what value(s) of α does this hold for?

$$\int_{-\infty}^{\infty} x(t)\,dt + \alpha\int_{-\infty}^{\infty} \mathrm{rect}(t) = 0$$

$$\int_{-\infty}^{\infty} x(t)dt = -\alpha \int_{-\infty}^{\infty} \mathrm{rect}(t)\,dt$$

$$\int_{-\infty}^{\infty} \mathrm{sinc}(2t)dt = \int_{-\infty}^{\infty} -\alpha\, \mathrm{rect}(t)dt$$ f.L.

$$\cancel{\frac{1}{2}\mathrm{rect}\left(\frac{W}{4\pi}\right) = -\alpha\, \mathrm{sinc}\left(\frac{\omega}{2\pi}\right)}$$

$$\cancel{\alpha = \frac{\mathrm{rect}\left(\frac{\omega}{4\pi}\right)}{2\,\mathrm{sinc}\left(\frac{\omega}{2\pi}\right)}}$$

$$\frac{1}{2} = \int_{-\infty}^{\infty} -\alpha\, \mathrm{rect}(t)dt$$

$$\frac{1}{2} = -\alpha \underbrace{\int_{-\infty}^{\infty} \mathrm{rect}(t)dt}_{\to 1}$$

$$\frac{1}{2} = -\alpha$$

$$\boxed{\alpha = -\frac{1}{2}}$$

def of eigenfunction

Bonus (6 points) Suppose $\cancel{x(t)}$ $f(t) = \cos(\omega_o t)$ is ~~an~~ eigenfunction of an LTI system S for any ω_o, and S cannot be defined as $S[x(t)] = ax(t)$ ~~for some constant~~ constant a. Is the system S causal? Justify your answer. ??

$$\cos\omega_o t = \frac{1}{2}e^{j\omega_o t} + \frac{1}{2}e^{-j\omega_o t}$$

complex exponentials are eigenfunctions.

True - LTI systems are causal.

This is an extra piece of paper to show your work. If you use this space for a question, for that question, please write "Refer to page 16."
