Math 33B Fall 2014 Midterm1 10/31/14 Time Limit: 50 Minutes Name (Print): tvelyn Chen

Ben West 25 TA name -- section number

This exam contains 7 pages (including this cover page) and 6 problems. Check to see if any pages are missing. Enter all requested information on the top of this page, and put your initials on the top of every page, in case the pages become separated.

You may not use your books, notes, or any calculator on this exam.

You are required to show your work on each problem. Organize your work, in a reasonably neat and coherent way, in the space provided. Work scattered all over the page without a clear ordering will receive very little credit. Formula that you might or might not need:

 The differential form Pdx+Qdy has an integrating factor depending on one of the variables under the following conditions.

If  $h = \frac{1}{Q}(\frac{\partial P}{\partial y} - \frac{\partial Q}{\partial x})$  is a function of x only, then

 $\mu = e^{\int h(x)dx}$  is an integrating factor. If  $g = \frac{1}{P}(\frac{\partial P}{\partial y} - \frac{\partial Q}{\partial x})$  is a function of y only, then  $\mu = e^{-\int g(x)dx}$  is an integrating factor.

• 
$$e^{i\theta} = \cos \theta + i \sin \theta$$

Do not write in the table to the right.

Problem	Points	S	core	
1	15	1	5	
2	15		15	
3	15	15		
4	15		15	
5	20		200	15
6	20	1	1)	
Total:	100		92	1

I, Evelyn Chen \_\_\_, will not disclose the contents of this exam before tomorrow.

1. (15 points) Solve the equation  $y' = \frac{x^2}{\sin y}$ .

$$\frac{dy}{dx} = \frac{x^{2}}{\sin y}$$

$$\sin y \, dy = x^{2} \, dx$$

$$\int \sin y \, dy = \int x^{2} \, dx$$

$$-\cos y = \frac{1}{3}x^{3} + C$$

$$\cos y = -\frac{1}{3}x^{3} + C$$

$$\sqrt{y} = \cos^{-1}(-\frac{1}{3}x^{3} + C_{1})$$

2. (15 points) Solve the equation  $e^y dx + (xe^y + y)dy = 0$ .

$$\frac{\partial A}{\partial B} = G_A = \frac{\partial X}{\partial \sigma} = G_A$$

eq is exact

$$F(x,y) = SP(x,y) dx$$
=  $Se^{y} dx$ 
=  $xe^{y} + \phi(y)$ 
=  $xe^{y} + \phi(y) = Q = xe^{y} + y$ 

$$\phi'(y) = y$$

$$\phi'(y) = y$$

$$\phi'(y) = y$$

$$(F(x,y,y) = xe^{y} + ye^{y} +$$

15

3. (15 points) Solve the equation y'' + 6y' + 9y = 0, y(0) = 0, y'(0) = 1.

$$\lambda^{3}+(\lambda+9=0)$$
 $\lambda^{3}$ 
 $(\lambda+3)^{2}=0$ 
 $\lambda=-3$ 
vepeated

 $y(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 
 $y'(t)=(1e^{-3t}+(1te^{-3t}))$ 

4. (15 points) Find all the real values of the constant p such that any solution to the differential equation y'' + py' + 9y = 0 satisfies  $\lim_{t \to +\infty} y(t) = 0$ . Justify your answer.

 $\lambda = \frac{-p \pm \int p^3 - 4.9}{3}$ = -b = [b2-36

There are three types of solutions to 2nd ope's characteristic real distinct &s, repeated &. and complex &

In order to let limt ++00 Y(t)=0,

11/1/20 in Y = (1e) + (2e)2+

Daco in y= (1exit + (2 texit

3) aco in

y= (1exit + (2 texit

y= To create such solution to

Characteristic eqs, phas to be positive for & (or a)

to be negative, and

there for pro

5. 
$$dy - 3y^{\frac{2}{3}}(y-1)(y^2-4)dt = 0$$
(a) (10 points) F:

(a) (10 points) Find all the constant solutions that are (asymptotically) stable.

(b) (10 points) Are the solutions to the above equation together with the initial condition y(0) = 1 unique? Justify your answer.

ify your answer.  

$$f = \frac{dy}{dt} = 3y^{\frac{3}{3}}(y-1)(y^2-4) \text{ is continuous}$$

$$\text{everywhere}$$

$$\text{everywhere}$$

$$\text{everywhere}$$

 $\frac{\partial f}{\partial y} = 11y^{\frac{3}{2}} - 20y^{\frac{3}{2}} - 8y^{\frac{1}{2}} + 8y^{\frac{1}{2}} \qquad f = 3y^{\frac{3}{2}} - 12y^{\frac{3}{2}} - 3y^{\frac{3}{2}} + 12y^{\frac{3}{2}}$   $\frac{\partial f}{\partial y} \text{ is not continuous at } y = 0$ therefore, uniqueness than does not apply  $\frac{\partial f}{\partial y} = 11y^{\frac{3}{2}} - 20y^{\frac{3}{2}} - 8y^{\frac{3}{2}} + 8y^{\frac{3}{2}} + 12y^{\frac{3}{2}}$ 

6. (20 points) The 10-gal tank is originally filled with 2-gal of salt solution with concentration 1/2 lb/gal. A spigot is opened above the tank and a salt solution with the concentration 1 lb/gal begins flowing into the tank at a rate of 3-gal/min. Meanwhile, a drain is opened at the bottom of the tank allowing the solution to leave the tank at a rate of 3-gal/min. Simultaneously, pure water is evaporating from the solution in the tank into the air at a rate of 2-gal/min. Let x(t)be the amount of salt (in lbs) in the tank at the time t. Find x(t).

of use the picture evaporate 0 lb/gal, 1 gal/min rate in = 3 gal . 1 db 1 lb/gal, 3 gal/min rate out = 2 gal x >+ (3-2-1)t rate in - rate out = 3 - X 2 gal/min x(0)= 2991- = ab < dx = Sat e In 13-x1 = et+c 3-X = CIE+

> x(0)=1 x(0) = 3-(1=1 C1= 2 x (t)= 3-2et
