## The rules:

You MUST simplify completely and BOX all answers with an INK PEN. You are allowed to use only this paper and pen/pencil. No calculators. No books, no notebooks, no web access. You MUST write your name and UCLA id. Except for the last problem, you MUST write out your logical reasoning and/or proof in full. You have exactly 50 minutes.

Warning: those caught violating the rules get automatic 10% score deduction.

Compute the probability that 4-subset A of  $\{1, 2, ..., 10\}$  satisfies:

- a) A has no odd numbers,
- A has at least one number  $\leq 3$ ,
- c) A contains 1 but not 7.
- d) the smallest number in A is divisible by 3

Let  $X = \mathbb{N} = \{0, 1, 2, \ldots\}$  be the set of all non-negative integers. For each of the following functions  $f: X \to X$  decide whether they are injective, surjective, bijective:

- $a) \quad f(x) = x + 1$
- $b) \quad f(x) = x^2 1$
- $c) \quad f(x) = 2x$

Problem 3. (15 points)

Let  $a_n = 1111 \cdots 1$  (n ones). Suppose  $a_k$  is divisible by 97. Use induction to show

that  $a_{k \cdot n} = 0 \mod 97$ , for all  $n \ge 1$ .

K=3

Base: N=1

akol = ak = Omod 97 /

111,111

IM, 111, 111

Step: Assume ax.n = 0 mod 97

· Prove ax. (m) = 0 mod 97

a6=10 - az + a3

09=1111

a3+3 = a2+

ak(n+1) = ak.n+K

ax-n = 0 mod 97 from inductive assumption

ak.n+k = 10 - ak + ak.n, divisible by 97 divisible by 97

So ax.n+x = 0 mod 97

 $a_3 = 111 \quad x-3 \quad 6+3$   $a_6 = 1111111 \quad n=2 \quad 9$
