

# MIDTERM 2 (MATH 61)

## PRACTICE EXAM

Name: \_\_\_\_\_

ID: \_\_\_\_\_

This exam has 7 pages, including the cover page. Please make sure your exam includes each page. Please write your name on *each* page you submit. You will have 50 minutes to complete this exam. **You may not use a calculator**, or consult your textbook, class notes, or any other materials.

Show your work for these problems, don't just give an answer. If a question asks you to prove something, please write a complete proof. Unless otherwise stated, you may use any results proved in class or in the textbook, but please make it clear when you are doing so. Unless otherwise stated, you will *not* receive full credit for giving the correct answer with no explanation. You may still earn partial credit even if your final answer is incorrect.

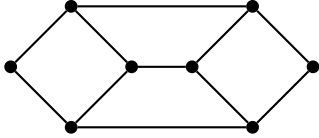

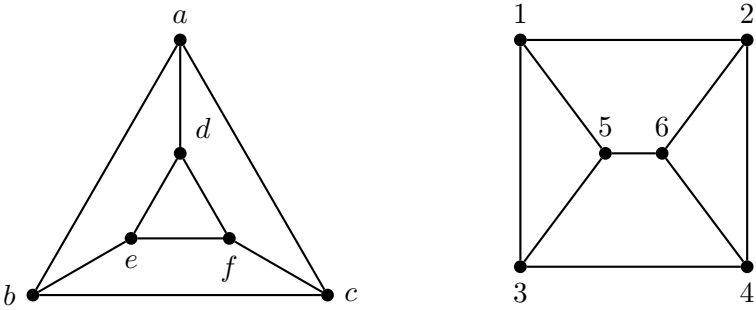

**Remember that you are bound by a conduct code, and that you may not look at anyone's paper or let anyone look at your paper.**

Total:	100	

Name: \_\_\_\_\_

1. [10 pts, 2 points each] Mark each of the following statements as either TRUE or FALSE. For this question you do not need to show any work beyond the final answer.

*Be sure to read the questions carefully!*

<p>(a) The complete bipartite graph <math>K_{61,2019}</math> has an Euler cycle.</p>	
<p>(b) There is a graph with 9 vertices in which every vertex has degree 3.</p>	
<p>(c) The graph <math>G</math> with adjacency matrix <math>A = \begin{pmatrix} 2 &amp; 0 &amp; 1 &amp; 0 &amp; 3 \\ 0 &amp; 4 &amp; 0 &amp; 3 &amp; 0 \\ 1 &amp; 0 &amp; 6 &amp; 0 &amp; 5 \\ 0 &amp; 3 &amp; 0 &amp; 2 &amp; 0 \\ 3 &amp; 0 &amp; 5 &amp; 0 &amp; 8 \end{pmatrix}</math> is connected.</p>	
<p>(d) The graph below is bipartite:</p> 	
<p>(e) The two graphs below are isomorphic:</p> 	

Name: \_\_\_\_\_

2. [30 pts] Solve the following recursion relations. In each case, your answer should be a formula for the  $n^{\text{th}}$  term of the sequence in terms of  $n$ .

*Show your work. You may use results proved in class or in the textbook, but make it clear how you are getting your answers. A correct answer on its own will not be sufficient for full credit.*

- (a) [6 pts] Find a *general* solution to the recursion relation  $a_n = 4a_{n-1} + 5a_{n-2}$ . (That is, find a formula for  $a_n$  in terms of  $n$  and some unknown constants, that will work for any choice of initial conditions.)

- (b) [4 pts] Find the solution to the recurrence relation  $a_n = 4a_{n-1} + 5a_{n-2}$  with initial conditions  $a_0 = 5$  and  $a_1 = 7$ .

Name: \_\_\_\_\_

- (c) [10 pts] Find the solution to the recurrence relation  $b_n = b_{n-1}^4 b_{n-2}^5$  with initial conditions  $b_0 = 1$  and  $b_1 = 16$ .

- (d) [10 pts] Find the solution to the recurrence relation  $c_n = 4c_{n-1} + 5c_{n-2} + 16$  with initial conditions  $c_0 = 0$  and  $c_1 = 2$ . **Note: This question makes use of an additional topic from chapter 7 which we didn't cover due to the canceled lecture. You may skip it.**

Name: \_\_\_\_\_

3. [20 pts] Use Dijkstra's algorithm to find the length of the shortest path (i.e. the path for which the sum of the labels is as small as possible) between  $a$  and  $z$  in the weighted graph below. You do not need to find the shortest path, finding its length will be sufficient.

Show each step of Dijkstra's algorithm. A correct final answer with no work shown will not be sufficient for full credit. Use the blank graphs below for your answer. If you make a mistake, clearly cross it out and continue using the next blank graph. There are additional blank graphs on the back of this page.

**Answer:** \_\_\_\_\_

Check this box if you used any graphs from the back of the page:

Name: \_\_\_\_\_

Name: \_\_\_\_\_

4. [25 pts] In each of the following graphs, either find a Hamiltonian cycle (i.e. a cycle which uses every vertex exactly once), or prove that the graph does not have a Hamiltonian cycle.

If the graph does have a Hamiltonian cycle, **CLEARLY** drawing this cycle on the provided graph (so that there's no ambiguity as to which edges are used, and in which order), or listing out the vertices in the order traveled (i.e. writing something like  $(a, b, e, d, c, a)$ ) will be sufficient for full credit.

If the graph does not have a Hamiltonian cycle, you must give an explanation as to why. *Simply drawing diagrams with no explanation will NOT be sufficient for full credit.*

(a) [10 pts]

Name: \_\_\_\_\_

(b) [15 pts]

Name: \_\_\_\_\_

5. [15 pts]

(a) [10 pts] Let  $G$  be a *simple* graph with 10 vertices, in which every vertex has degree at least 5. Prove that  $G$  is connected. [Hint: You may want to use the pigeonhole principle.]

(b) [5 pts] Draw a *simple* graph with 10 vertices which is *not* connected, in which every vertex has degree 4.
