61 Midterm 2

Kendrake Jay Tsui

TOTAL POINTS

50 / 70

QUESTION 1

1 Exercise 1 8 / 10

- 2 pts (1) Incorrect [correct response T]
- 2 pts (2) Incorrect [correct response F]

√ - 2 pts (3) Incorrect [correct response T]

- 2 pts (4) Incorrect [correct response T]
- 2 pts (5) Incorrect [correct response F]
- 0 pts All correct
- (3) Each of n elements in X has n choices for where it goes.

QUESTION 2

2 Exercise 2 0 / 10

- 5 pts (1) Incorrect
- 1 pts (2) Incorrect: off-by-one error.
- 2 pts (2) Incorrect: gave answer m choose n instead of (m choose n) * n!.
 - 5 pts (2) Incorrect: other reason
 - 0 pts Both correct
- √ 10 pts Skipped

QUESTION 3

3 Exercise 3 10 / 10

√ - 0 pts Correct

- **3 pts** Miscounted letters/repeats (e.g. answered 10!/2!)
 - 10 pts Not graded
- 8 pts Only recognized 10! permutations without considering repeats. (Or dealt with repeats incorrectly.)

QUESTION 4

4 Exercise 4 6 / 10

- O pts Correct
- 10 pts Skipped

- **7 pts** No further than expanding binomials (correctly)
 - 2 pts Small algebra error

√ - 4 pts Made progress, but substantial algebra error or didn't finish

- 8 pts Showed some indication of what the individual terms mean combinatorially, but not how they're related
 - 0 pts Click here to replace this description.

QUESTION 5

5 Exercise 5 7 / 10

- 0 pts Correct
- 10 pts Incorrect
- 3 pts Apply Pigeonhole Incorrectly
- 8 pts Didn't apply Pigeonhole
- 10 pts Not Graded
- 5 pts Flawed argument, did not consider birthdays on same day

- 3 Point adjustment

Why do you only have to consider those two cases?

QUESTION 6

6 Exercise 6 10 / 10

- √ 0 pts Correct
 - 10 pts skipped
 - 3 pts Algebra mistakes in solving for coefficients
 - 5 pts Incorrect auxiliary polynomial
- **9 pts** Incorrect, no attempt at application of method
- 6 pts No solution after finding aux polynomial and root
 - 5 pts Incorrect solution form
 - 5 pts Incorrect root for aux poly

QUESTION 7

7 Exercise 7 9 / 10

- **0 pts** Correct
- 10 pts Skipped
- 1 pts Correct answer, but only justified by a picture

√ - 1 pts Correct answer, but missing justification

- 4 pts Omitted empty graph
- 9 pts Incorrect, with no clear justification
- 8 pts Miscounted because had edges not

connected to the given vertices

- 8 pts Miscounted because counted vertices that

were connected to other vertices

- **5 pts** Did not include the empty graph in the count

MATH 61 - MIDTERM EXAM 1

0.1. Instructions. This is a 50 minute exam. You should feel free to quote any theorems proved in class, as well as anything proved in the homework or discussion section. There are 7 questions—on the real exam, you are required to do the first true/false question, and choose 5 of the remaining 6. Only 5 problems other than the true/false question will be graded so you should indicate which problems you want graded by marking the one you do not want graded with an X, in the case that you attempt all 6. Each question is worth 10 points. Unless otherwise specified, you are required to justify your answers.

Exercise 0.1. Indicate whether the following statements are true or false. You do not need to justify your answer.

- (1) Suppose X and Y are finite sets with |X| and |Y| even. Then $|X\triangle Y|$ is true even.
- (2) If $0 \le k \le n$,

 $\binom{n}{k} = \binom{n-k}{k}.$

talse

(3) If |X| = n, there are n^n functions from X to X.

(4) There are $2^n - 1$ sequences of 0s and 1s of length n with at least one 0.

(5) Any sequence $\{a_n\}$ satisfying the recurrence relation

 $a_{n+2} = 4a_{n+1} + 2a_n$

must have only even terms.

false

13

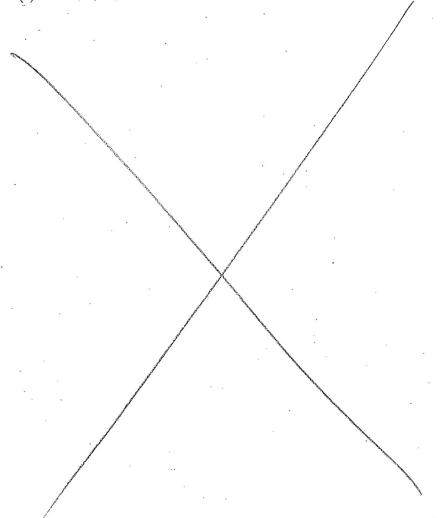

100

2

Exercise 0.2. Suppose X and Y are finite sets with n = |X| < |Y| = m.

(1) Show there are n! functions from X to X that are both injective and surjective.

(2) How many injective functions are there from X to Y?

Exercise 0.3. How many words can be obtained by rearranging the letters in

CAUFORNIA

(Note: they do not need to be real words and you can leave your answer in combinatorial notation)?

CA. LIFOKA

1

MZ: N-right

Exercise 0.4. Show that if $2 \le k \le n$, then

$$\binom{n}{k} + 2\binom{n}{k-1} + \binom{n}{k-2} = \binom{n+2}{k}.$$

$$\frac{n!}{(n+k)! \, k!} + \frac{2n!}{(n+k+1)! \, (k+1)!} + \frac{n!}{(n+k+1)! \, (k+1)!} = \frac{n!}{(n+k+1)! \, k!} + \frac{2n! \, k}{(n+k+1)! \, k!} + \frac{n! \, (k)! \, k+1}{(n+k+1)! \, k!} + \frac{n! \, (k)! \, k+1}{(n+k+1)! \, k!}$$

$$= \frac{n! \left[\ln^2 - \left[\ln^2 + 2 \ln + \left[\ln^2 + 2 \ln + \ln \right] \right]}{\left[\ln + \ln \right]! \left[\ln + \ln \right]! \left[\ln + \ln \right]! \left[\ln + \ln \right]}$$

N! (m+1)(n+2)+ k2-2k-kn)
[n+2)! k!

Chentre & Farings

Exercise 0.5. Let's pretend that there are no leap years so every year has 365 days. Show that if there are 185 students in our class, then there are two students who have either the same birthday or have consecutive birthdays.

Suppose that there birthdays on all the days of the year. That would be 182 Students Whose birthlays we know. There are three students left whose birthdays we don't know No mater where the remaining birthdays are they will either be on an even day then they share a birthday) or they will be on an odd day throw there are consecutive brothdays).

The Same arguement can be made it we Supposed there were birthdays on all the add days except we would know 183 students birthdays and have 2 left to place.

Exercise 0.6. Find the solution to the recurrence relation $a_n = 6a_{n-1} - 9a_{n-2},$

subject to the initial conditions $a_0 = 2$ and $a_1 = 9$.

$$(2-b)^{2}=0$$

36

$$a: 9 = 2(3) + d(1)(3)$$

$$9 = 6 + 3d$$

18+ 8(18)

$$a_{n}=2(3^{n})+n(3^{n})$$

Connected

anusthing else

Exercise 0.7. Suppose G = (V, E) is a graph. Say that a vertex $v \in V$ is unfriendly if it is connected by an edge to no other vertex. If |V| = 3, how many possible graphs are there with vertex set V that contain an unfriendly vertex?
